ACT365, Oliver Law Security & EV Charging Providers

OLS was tasked with providing the EV Charging Provider business with a site wide security system for their Doncaster location. This encompassed an access control system for the front entrance, CCTV and Intruder alarm.

The system included **ACT365 cloud-based access control** this was to secure the main door during opening hours and to also restrict access to visitors or anyone on the business park without a valid card for entry. The cloud-based system is perfect for a growing business and creates the start for a corporate system. Easily managed via the cloud-based app and viewable via any number of browsers, no management PC or server onsite is required making the administration of the system easy for the customer and HR dept to manage.
