

## Case Studies

### Multiple-site installation with independent mustering

Teva Pharmaceutical Ireland is part of Teva Pharmaceutical Industries Ltd, a world-leading generic Pharmaceutical company. The company employs 38,000 people worldwide and, in addition to Ireland, has production facilities in Israel, North America and South America.

#### Brief

Management software together with readers and controllers were required to secure the manufacturing site of Teva at Waterford in Munster which had unique requirements due to multiple buildings across a large estate.

#### Solutions Provided

1. The project is a campus-style system across an estate with the unusual feature of external mustering points on a by-building basis. This means that if there is an incident such as a fire alarm in a single building, marshals have the option to conduct a mustering check on the occupants of just one component building at the site.
2. Pro-Tech have installed ACTpro 1030e proximity readers which Teva staff are using with ACT RFID fobs. The readers have ingress protection of IP67 which has allowed them to be fitted both internally and externally across the site. The readers are functioning with ACTpro 4000 controllers. The management platform is ACTenterprise. ?
3. A notable aspect of the site is that it is a mature installation. Teva has had a problem-free experience with the products and has benefited from their evolution in successive versions as well as the scalability of the ACTpro suite.
