ACT Enterprise: Rules Mapping Engine Demo

Andrew Fulton, Strategic Business Development Director at Vanderbilt Industries, demonstrated at IFSEC London how this feature is an easy point-and-click way to enable advanced configurations of triggers based on selected action events such as:

- System inputs or outputs and events
- Card swipe outcomes across the access control system
- As well as other elements of an integrated system such as intrusion system events

The rules mapping engine is one of the best software on the market for creating cause and effect rules. Effects can be Lock or Unlock Door, Email Notifications, Input or Output Activation, or Relay Activation.

Check out our two-minute demonstration below:
