### ?Demo: ACTpro Rules Mapping & Cleaning Doors

***This demo outlines how you can create a rule in the ACTpro rules mapping engine to help ensure that access points to your business are regularly cleaned.***

This is a simple rule that will help businesses implement new health and safety measures due to COVID-19. Following a few quick steps, you can setup notifications for when a door has been used a specific number of times to have its surface cleaned. This will ensure that the doors that are being more commonly used by customers and staff can be cleaned more regularly.

**How it works:**

1. Create a new rule under **Rules**, titled “Clean door every 5 users.”
2. Under **Door**, select the specific door you want this rule to apply to.
3. Under **Event Type**, select Access Granted and Exit Granted.
4. Combine **Door** and **Event Type** so that when these events happen, an email will be sent.
5. Under **Send Email**, type in your message (for example, “Door has been used 5 times. Please clean it.”)
6. Under **Trigger Event with Occurrence**, select the number of times that you want the event to occur before the email is triggered.
