October Events: ADI Benelux & Sectech Sweden

Two such events are the ADI Benelux Expo in the Netherlands on 21 October and Sectech Sweden between 27 – 28 October.

Mike Issa, Region Manager of South Europe, Middle East and Africa, is looking for the Benelux event. ComNet products will have a heavy focus at this Expo with the company's industrial switches, media converters and wireless transmission to the fore.

"I am looking forward to catching up again with my Dutch and Belgian customers at the ADI Benelux Expo. People should not miss this event as we will be showcasing the latest in **industrial transmission equipment**," Issa says.

Issa in particular is excited to exhibit the **SSiQ Rugged device** from the newly acquired Razberi portfolio. Rugged is a combined server, switch and storage device for Edge

computing that takes standalone devices and combines them into a single logical unit.

At Sectech Sweden Vanderbilt and ComNet will be exhibiting **Omnis 7.1** and **Razberi Monitor**, as well as an **ACT365** live to show on a tablet.

Omnis 7.1 was recently released on 30 September and includes some new features and improvements, like log report enhancements.

As Razberi Monitor is nominated in the **Video Surveillance category at the Detektor International awards**, the winner of which will be announced at the event, there is additional excitement amongst the Vanderbilt and ComNet team that will be in attendance.

Razberi Monitor™ is a software platform that provides a top-down view of the physical security network and ecosystem without IT resources. It monitors and manages all the system components for both **cybersecurity** and system health, and can be deployed from the cloud or on-premise.

Holger Muller, Project Sales Manager for Sweden, states: “We think Sectech Sweden will be a good show because we can actually meet people in 3D after almost 18 months of working from home and seeing people in 2D. We hope customers will take this long wanted opportunity to meet in person and come and visit us.”
