How-to: Quick user set-up with SPC Connect import

The SPC Connect functionality enables the import of users from a file into an SPC system.

This can be used to configure a large system quickly Excel can be used to accomplish this. Advanced options where user pins can be automatically created and sent to the customer are also available.

Email User PIN Options

This is a very useful feature when used with the AUTO pin feature. This can help protect a business by ensuring the customer's pin remains private and confidential. However, the option for an installer to choose a pin and email it to a customer is also available. In order to

automatically send a user PIN to the user, their email address must be valid.

****These functions requires the SPC controller to have firmware 3.8.5 or greater.***
