Vanderbilt is finalist at Security and Fire Excellence awards

Vanderbilt has been named as a finalist for the Security Hardware Manufacturer of the Year category for the Security and Fire Excellence Awards.

The awards are supported by IFSEC and FIREX.

This award aims to pick out the hardware vendor which has gone above and beyond in three core areas. There are innovation, marketing, and commitment.

Innovation looks at bringing well-designed and well-received products to market in the last 12-months. Marketing examines exhibiting commitment to communicate features of their new products to installers and benefits to end-users.

Commitment seeks to highlight high physical, integration and cyber security standards, both in terms of meeting existing security standards and enabling integration and hardening systems using these products against cyberattacks.

This category also takes into consideration being a good employer and building products which meet or exceed the latest environmental and energy usage standards to minimize impact on the environment.

Vanderbilt designs, manufactures, and distributes systems that safeguard environments and organizations of all sizes. Agility, adaptability, and dependability are distinctive marks of the Vanderbilt brand and these decisive traits satisfy a broad variety of customers' application needs.

The winner will be announced on Wednesday, 21 November in the London Hilton on Park Lane.
