Webinar On-Demand: Why Physical Security and Cloud go together

This webinar is now available on-demand.

During this webinar, you will explore why Physical Security and Cloud go together. According to trendmicro.com, cloud expenses are expected to amount to 70% of all tech spending in 2020.

This is because cloud computing:

- Enables users and businesses to run software and store data without installing it.
- Offers redundancy, stability, and security.

- Eliminates the problem of buying and maintaining software.
- Allows access from basically anywhere.

Good security systems require regular updates, system backups, and a proper level of technical expertise from the installer and the end-user. This is often overlooked in small-to-medium-sized security systems. Access Control as a Service (ACaaS) and Video Surveillance as a Service (VSaaS) offer similar advantages as using cloud-based Office, Production and Storage software - all with Better User Experience, Better Security, at a Better Price.
