ACTpro Keeps Sheffield College Enrollment Moving

Sheffield College is a multi-site campus with a student population of 23,000 spread over three locations.

Brief

Educational establishments frequently have a large flow of enrollment details in a short period, with students who are simply progressing to the next year needing to be re-registered too.

Solutions Provided

1. The ACTpro 3000 controllers were installed on more than 150 doors, primarily in building entrances. The installer also customized the ACTWin pro software to function alongside the college's

enrolment system.

2. A tool facilitated an XML drop by which the college enrollment database populates ACTWin pro without any re-keying or risk of duplication. Even a conservative estimate indicates there has been a saving of 23 man days per year which would otherwise have been spent on data entry.
3. Students with impaired mobility can activate the door controllers through proximity scanning of their cards at turnstiles. The project is IP-addressable throughout.

Installer

CSS Ltd was established in 1986. Their business approach is key to their success, which is to be committed to customer service and remain accessible to both staff and customers alike. Visit: www.cssltd.co.uk.
